Art Unit: 2613

DETAILED ACTION

1. Prosecution on the merits of this application is reopened on claims 1, 4 and 7 considered unpatentable for the reasons indicated below:

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 1,4 and 7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. With respect to claims 1, 4 and 7 it is not known how one of ordinary skill in the art would be able to make and use a "wavelength division multiplexer" which is able perform filtering functions. Specifically, "filtering input upstream data service signals, such that the filtered signals are output to the upstream optical receiver." As is generally known in the art, wavelength division multiplexers are not capable of performing filtration of input upstream data service signals. Nowhere in the specification is it mentioned as to how the claimed wavelength division multiplexers would be able to perform filtration of input upstream data service signals. Therefore, the claimed wavelength division multiplexer which allegedly can perform such a function is not enabled by the specification.

Allowable Subject Matter

4. Claims 10-11 are allowed. The following is an examiner's statement of reasons for allowance:

Application/Control Number: 10/600,694

Art Unit: 2613

With respect to independent claim 10, the prior art does not fairly teach a first wavelength division multiplexer that receives multiplexed signals including pumping optical signals from the central office, and divides downstream optical signals for downstream data service, broadcasting optical signals for broadcasting service and the pumping optical signals by de-multiplexing the multiplexed signals wherein an optical amplifier media receives the broadcasting optical signals and the pumping optical signals from the wavelength division multiplexer such that the broadcasting optical signals are amplified by the pumping optical signals and in combination with all other limitations disclosed in independent claim 10

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth J. Malkowski whose telephone number is (571) 272-5505. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ken Vanderpuye can be reached on (571) 272-3078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/600,694
